CS 461 Software Engineering II

Retrospective Meeting

The class project sprint went well overall. Everyone in the team did their equivalent shares of work and produced, at the end of the sprint, a functioning site. We had a lot of communication through our discord server and were constantly updated with the stages each team member was on their work. One thing that we could have done better was plan better with what we are supposed to be doing during our meetings as well as outside of planning what should be completed outside our meeting times. We also could have done more research and apply that to our user stories.

Some things that we recommend for next sprint is to remember that we are all equal and if an individual has a dependency, make sure the situation is resolved and be in contact with other group members. We also recommend staying organized and effective when it comes to time and work. One last thing we recommend is to explain in comments what some sections or lines of code mean especially if they could be potentially hard to understand for other team members.
